A NATIONAL RESOURCE FOR ADVANCED UNDERSEA TESTING, INNOVATION, AND COLLABORATION.

The MITRE BlueTech Lab is a state-of-the-art, indoor maritime test facility and collaborative laboratory for innovators and researchers to advance maritime technology, strengthen climate resilience, and increase national security and safety.

Testing maritime technologies at sea is expensive and difficult. Conducting in-water testing prior to launching costly at-sea experiments radically reduces risk. And sharing access to resources reduces costs and increases agility.

MITRE’s BlueTech Lab is a testing facility that enables the regional BlueTech innovation community to rapidly prototype new technology quickly and safely.

Featuring the longest and one of the largest tanks in the region (106’ x 40’ x 19.7”), with a capacity of approximately 620,000 gallons—the BlueTech Lab’s test tank accommodates the use of unmanned undersea and surface vehicles in a large, controlled space and enables testing of communication and acoustic sensing systems at lower transmission frequencies and longer signal lengths than other facilities.

Together, we are enabling greater understanding of the world’s oceans.
Located in Bedford, Massachusetts, MITRE BlueTech Lab's test tank is available for reservation by government, research, and industry partners.

What We Do
Research and development, testing, rapid prototyping, and workforce development in acoustic sensing, acoustic communications, unmanned underwater vehicles, maritime autonomy, and climate science.

BlueTech Lab Capabilities

Positioning and Measurement
- Eight underwater video cameras and 20 underwater motion capture systems with localization and tracking accuracy of ~1cm.
- Precision acoustic calibration and beam pattern measurements between 5-600 kHz with 0.1° resolution
- Full-bandwidth raw data acquisition with synchronized multi-channel arbitrary waveform transmit and receive
- Catalog of underwater transducers for transmit and receive

Platforms
- Vehicles for payload testing, including surface boats, ROVs, and UUVs
- Suite of COTS Acoustic Communication (Acomms) modems

Connectivity
- Real-time collaboration and information sharing with academic, industry, and government partners across the nation via Blue Networked, Experimentation, Research, and Virtualization Environment (BlueNERVE™)

Infrastructure
- Unclassified or classified experimentation up to Collateral Secret
- Two-ton overhead gantry crane
- Surface-level mobile platform with rotary stage for precise positioning
- Dry lab with shared test equipment and visitor storage
- Access approved for certified scientific divers

Featuring the longest and one of the largest tanks in the region

106’ LONG
40’ WIDE
19’+ DEEP
620,000 GALLON CAPACITY
